

## **PRESS RELEASE**

**For immediate release**

### **FRACO AWARDED IN FRANCE**

**The new FMC-3 platform received favorably by the construction industry**

St-Mathias-sur-Richelieu, February 19, 2018 – Launched in Las Vegas as part of the World of Concrete exhibition, Fraco's new FMC-3 work platform has been awarded a *Mat d'Or 2018*.

Organized by SAGERET, the specialist in building and public works communication in France, the *Mat d'Or* awards recognize each year the best equipment for construction professionals. The list is based on a large survey of professionals themselves, users or potential buyers.

The criteria used to nominate the *Mat d'Or* winners are: 1) relevance / usefulness; 2) design / ergonomics; 3) sustainability; 4) comfort.

Designed by Fraco's technical team in collaboration with its European partners, the FMC-3 is a working platform with a rack and pinion lift mechanism. It is intended for construction contractors who wish to benefit from flexible work equipment with medium load capacity. It has been designed so that it can be mobilized quickly with a minimum of resources.

#### **ABOUT FRACO**

Fraco Products Ltd. is a Canadian manufacturer of mast access systems such as work platforms, construction elevators, industrial elevators and transportation platforms. This equipment is intended for the construction of buildings, as well as for industrial markets, infrastructure works and the electricity generation sector. Fraco also has a solid reputation in developing access systems for special projects. The company primarily serves markets in North America and Europe but remains open to the world.
